

Oxygen Therapy Awareness

Aim

To give participants an appreciation of why Oxygen Therapy would be required and their responsibilities within this.

N.B This session is awareness only and does not include a competency framework - this will need to be completed in the delegates' own work area with a competent assessor.

Target Group

Anyone working in a health and/or social care setting. Please remember that this is a basic awareness session. The assumption is that all participants will be working with service users who require Oxygen Therapy.

Delivery method, venue and duration - date(s) to suit you

- EITHER face-to-face in your own training room over two hours ...
- OR virtually using Zoom or MS Teams over two hours
- *(This topic can be covered perfectly well in two hours, so if you're having it delivered face-to-face you might wish to have two or three short sessions - not necessarily the same topic - on the same day to keep your costs down)*

Learning outcomes: by the end of this session participants should:

- Explain benefits of oxygen therapy
- Identify indications and contraindications for the use of oxygen
- Explain the dangers of using compressed gas
- Understand the use, storage and handling of oxygen
- Understand operational checks
- Identify when oxygen is required
- Know the types of Oxygen Administration devices

Training methods used

All of our training sessions, whether face-to-face or virtual, are intended to be as interactive as possible. Participants are encouraged to ask questions, make comments and bring up their own issues. We use lots of different methods including quizzes, case studies, video clips and small group work as well as direct teaching. We want participants to leave the session saying "that was really enjoyable - and it was directly relevant to my working life."
